## Determination of CPV Higgs mixing angle in ZZ-fusion at 1.4 TeV CLIC

*Tuesday, 30 August 2022 18:00 (1h 30m)*

In this talk we discuss the CP violation in the Higgs sector under assumption that Higgs is a mixture of CP even and odd states. Study is done in ZZ-fusion, at the intermediate energy stage of CLIC, in full simulation of a detector for CLIC and machine and physics related backgrounds. By measuring the properties of electron and positron in the final state, selecting the Higgs dominant decay to  $b\bar{b}$  to reduce backgrounds, we discuss the statistical precision of CP-violating mixing angle measurement with  $2.5 \text{ ab}^{-1}$  of data.
