

## Recent HERA Standard Model results

*Wednesday 9 July 2025 19:40 (20 minutes)*

Although the HERA experiments finished data collection more than 15 years ago, there is still a lively program ongoing within the H1 Collaboration, with maximum effort put into learning as much as possible from the deep inelastic scattering experiments. This report presents the most recent measurements of Standard Model physics from the H1 experiment, emphasizing new techniques based on deep learning applied to obtain these measurements.
